APPLICANT: Trang, Maria
APPLICANT: Trang, Maria
APPLICANT: Loper, John C.
APPLICANT: Loper, John C.
APPLICANT: Geneson, Martin
TITLE OF INVENTION: CYTOCHROME P450 MONOOXYGENASE AND NADPH CYTOCHROME P450 OXIDOREDUC
TITLE OF INVENTION: GENES AND PROTEINS RELATED TO THE OMEGA HYDROXYLASE COMPLEX OF CFI
TITLE OF INVENTION: TROPICALIS AND METHODS RELATING THERETO
FILE REPERENCE: 1010-12
CURRENT APPLICATION NUMBER: US/09/976,800
CURRENT FILING DATE: 2001-10-12
NUMBER OF SEQ ID NOS: 118
SOFTWARE: Patentin version 3.1
SEQ ID NO 106
LENGTH: 267
                                       Sequence 24, Application US/09911781
Patent No. US20020034788A1
GENERAL INFORMATION:
APPLICANT: Craft, David L.
APPLICANT: Elrich, Dudley
APPLICANT: Application USE OF CYP52A2A PROMOTER TO INCREASE GENE EXPRESSION IN YEAST
TITLE OF INVENTION: USE OF CYP52A2A PROMOTER TO INCREASE GENE EXPRESSION IN YEAST
FILE REPRENCE: U0012 OS/0AAP (1010-49)
CURRENT PILING DATE: 2001-07-24
NUMBER OF SEQ ID NOS: 34
SEQ ID NO 24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ..

Sequence 16922, Application US/10369493

Sequence 16922, Application US/10369493

GENERAL INFORMATION:
APPLICANT: Cao, Yongwei
APPLICANT: Slater, Steven C.
APPLICANT: Goldman, Barry S.
APPLICANT: One INVENTION: EXPRESSION OF MICROBIAL PROPERTIES
ITLE OF INVENTION: PLANTS WITH IMPROVED PROPERTIES
ITLE OF INVENTION: PLANTS WITH IMPROVED PROPERTIES
ITLE REFERENCE: 38-10(5205.)B
CURRENT APPLICATION NUMBER: US/10/369, 493
CURRENT PILING DATE: 2003-02-28

PRIOR FILING DATE: 2003-02-28

PRIOR FILING DATE: 2002-02-21

NUMBER OF SEQ ID NOS: 47374

SEQ ID NO 16332

LENGTH: 159
                                                                                               APPLICANT: Barbazuk, Brad
APPLICANT: Barbazuk, Brad
APPLICANT: Li, Ping
APPLICANT: Li, Ping
TITLE OF INVENTION: Rice Nucleic Acid Molecules and Other Molecules Associated With
TITLE OF INVENTION: Plants and Uses Thereof for Plant Improvement
TITLE OF INVENTION: Plants and Uses Thereof for Plant Improvement
TITLE OF INVENTION: Plants and Uses Thereof for Plant Improvement
